

Regina Libby, PSCA Secretary
50 Goose Ln, Coventry CT 06238

The Pyrenean Shepherd Club of America is committed to the continued health of Pyrenean Shepherds; therefore we recommend the following testing be done on all breeding stock, as per our requirements submitted to the Canine Health Information Center:

Required Testing

OFA or PennHip or OVC evaluation for Hip Dysplasia
OFA or CERF annual eye evaluation by a boarded ACVO Ophthalmologist
OFA evaluation for Patellar Luxation
CHIC DNA

Optional Testing (*highly recommended*)

OFA cardiac evaluation

These tests are vital to help protect the future of the breed, and to give the dogs the best chance for a long, and healthy life. When searching for Pyrenean Shepherd breeders, be sure to verify that they are doing the recommended testing on all sires and dams before breeding.

This Health Statement approved by the Pyrenean Shepherd Club of America Board of Directors
