

January 4, 2015

The Xoloitzcuintli Club of America Board has decided that we would like to submit the following tests as our recommended testing for our breed.

OFA: Standard size Hips  
Toy and Mini size Patella

CERF

Cardiac

The tests above are all very important to this breed and we have already seen evidence of problems in all of them. Below is something we are worried will show up, but we are not comfortable adding at this time for CHIC, however if there is a way to list it as extended testing or suggested further testing, that would be great.

Von Willebrand

Thank you for your time and attention to this matter.
